

What devices are compatible with cloudLibrary™?

CloudLibrary™ can be used on android-based tablets and smartphones, Apple devices (iPad/iPhone/iPod Touch), Kindle Fire tablets (third generation and up), computers (PC, Mac OS) and most eReaders (Kobo, Nook, Sony).

Note: cloudLibrary™ is currently not compatible with Kindle eReaders.

For more information on device compatibility and how to get started, please visit yourcloudlibrary.com for helpful instructions and tutorials.

I own a new Kobo® eReader with OverDrive® as a built-in feature. Can I get cloudLibrary™ built in for my Kobo® eReader?

No. cloudLibrary™ integration is not available for Kobo® eReader products.

However, eBooks from cloudLibrary™ can be transferred to eReaders using Adobe Digital Editions.

Note: Audiobooks are not transferable to an eReader.

Please visit yourcloudlibrary.com for helpful instructions and tutorials.

Why do some titles “disappear” in cloudLibrary™?

Pointe-Claire Public Library has partnered with other public libraries across Quebec to form a cloudLink consortium. Basically, cloudLink allows participating libraries to pool eBook and eAudiobook collections together on cloudLibrary™, providing a greater selection of titles and more “available now” copies to library cardholders. The reason why some titles may seem to “disappear” in cloudLibrary™ is because they belong to another library within the consortium and have been borrowed. These titles will reappear once they are returned and available to borrow again. All Pointe-Claire Public Library owned titles remain visible, available for loan and for holds on cloudLibrary™ regardless of their availability status.

Will my OverDrive®/Libby account with another library be impacted by Pointe-Claire Public Library discontinuing OverDrive/eMedia/Libby

If you also have an OverDrive®/Libby account with another library, your access will be unaffected. However, you will no longer have access to the content owned by Pointe-Claire Public Library. That content will only be available via cloudLibrary™.
